

## ***Full Stack Engineer, Full Time, In-House***

### Role

This full-time software development role includes ideation, prototyping, design, and implementation. You should be a proponent for clean design, maintainability, and reusability, and a follower of TDD.

### Requirements

- At least 2 years of experience in full stack software development. Comfortable working across the full stack.
- Python, django, Postgres,
- Experience with ML libraries in Python a big plus
- Angular, React, JavaScript,
- Front end visualization libraries D3.js and HighCharts.js
- Hands-on experience with AWS a plus
- Hands-on knowledge of version control systems, development workflow, Devops, and continuous integration

### Why work at Paradata?

We live in the most transparent generation but have the least visibility into that transparency. Lack of access to publicly available information is the challenge of our times. Just like Google organizes web pages based on their PageRank™ algorithm, we organize components that our customers need to buy from their supply chain, based on elements like price, tariffs, and compliance, based on PartRank™ - our ML-based algorithm. We help our customers find the right components for their awesome products.

We are a small fun bunch committed to making a difference in our segment along with spending a lot of time discussing music and food. And, we get to work in the energetic WeWork Riverpark environment in downtown San Jose, close to great restaurants (did we mention we like food?). If this sounds like something you would enjoy, let's talk. Drop us a line at [careers@paradata.io](mailto:careers@paradata.io), and see if our open positions are a mutual fit.

### Benefits

Competitive compensation  
Medical and dental plus 401k  
Flexible work schedule
